

RESIN PLATE

Abstract of the disclosure

A resin plate comprising a base layer and a surface layer placed on at least one side of the base layer is provided. The base layer is made from a methyl methacrylate polymer having about 30 % by weight or more of a methyl methacrylate unit as a monomer unit, and the surface layer has a thickness of about 5 μm to about 500 μm and is made from a resin composition containing about 40 parts by weight to about 95 parts by weight of a methyl methacrylate resin and about 5 parts by weight to about 60 parts by weight of a vinylidene fluoride resin with respect to 100 parts by weight in total of the methyl methacrylate resin and the vinylidene fluoride resin. The resin plate has a superior transparency and little deformation due to moisture absorption.
